OVERVIEW

ShareLog revolutionizes manual reporting in IT security auditing by transforming the SAP audit logs into an intelligent, adaptable, and automated smart reporting system.

KEY FEATURES

A smarter, more adaptable, and scalable reporting system to mitigate the risk of unauthorized incidents within the SAP system.

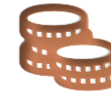

Filtering, sorting, and compiling the daily audit reports.

An intelligent report offering flexibility to configure reporting for various intricate scenarios, meeting both audit and business requirements.

KEY BENEFITS

Very Economical

Turnkey Implementation

Enhanced encryption for additional security

Store and manage large audit files effortlessly

Free Post Go-Live Support and Maintenance for one month

Automated email alerts and reports

Easily configurable

Operates across all environments. Development, Quality, and Production.

ShareLog
Smart Security Audit Reporting

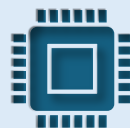

WHY SHARELOG

- ❖ ShareLog simplifies the process for the SAP Audit and Basis team by filtering, sorting, and compiling the daily audit report. This helps to identify unintended, intended, and suspicious events in the SAP system, reducing the substantial human resources typically required for these tasks.
- ❖ ShareLog help track and report the activities and changes within the SAP system, providing an essential tool for detecting unauthorized access, fraudulent activities, and ensuring adherence to policies and regulations
- ❖ ShareLog achieves substantial savings in manpower by streamlining the analysis of audit reports, optimizing the use of valuable resources. This efficient approach is anticipated to yield a return on investment (ROI) within just a few months of implementation.
- ❖ ShareLog can be tailored to meet the specific needs of the organization. The rules for filtering and analyzing audit logs in ShareLog can be easily adjusted and configured, with additional enhancements made effortlessly to suit organizational requirements.

SHARELOG SECURITY

ShareLog offers top-tier encryption to securely store audit files, ensuring peace of mind even when enabling audit logs in low storage space systems.

ShareLog stored audit files can be encrypted and decrypted seamlessly within the ShareLog system.

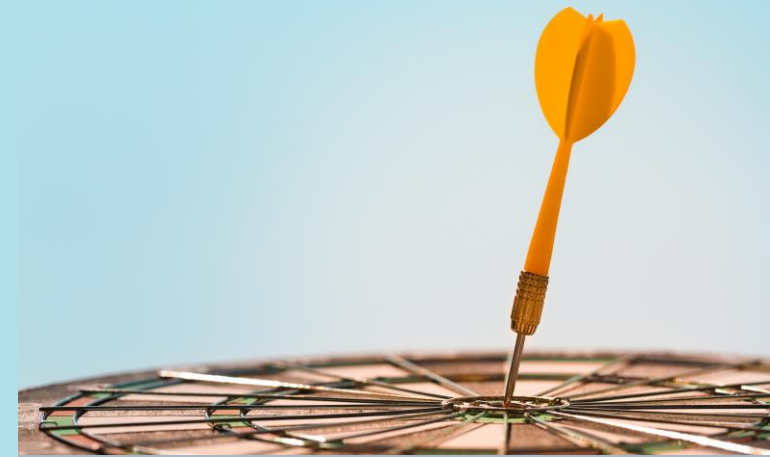

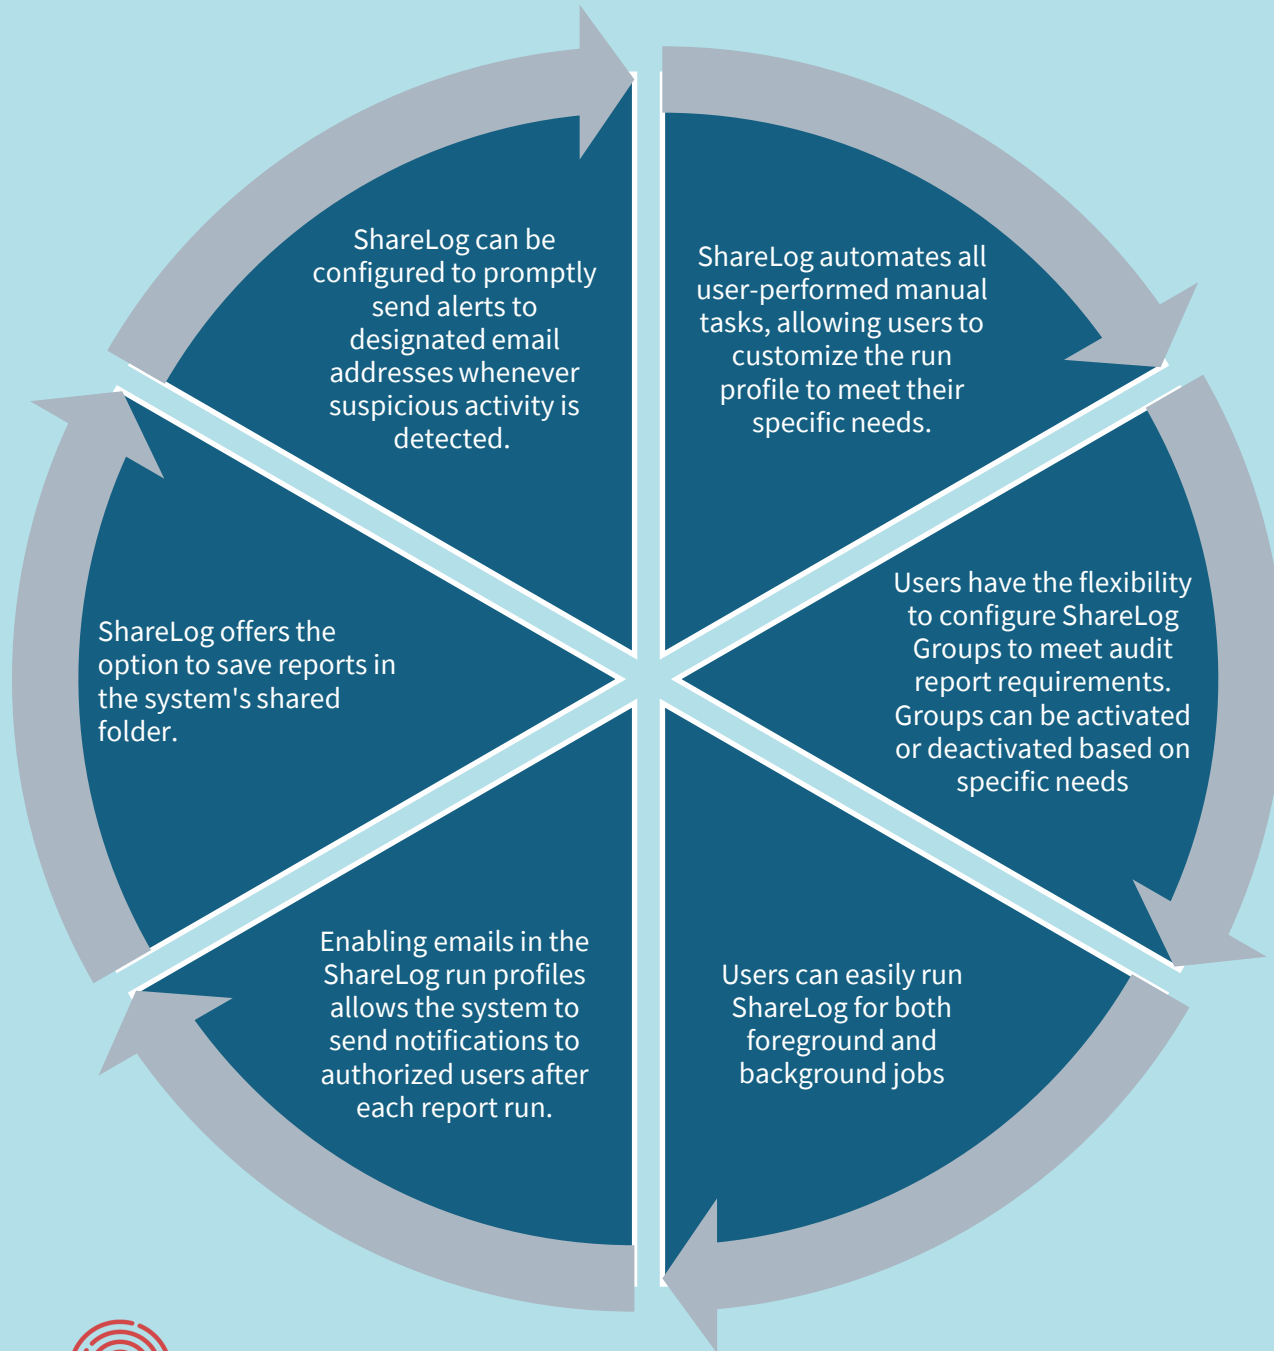

The encryption is done in a compressed form, and the users can easily store the file, in the system share folder with ease.

The file can be decrypted back in the original system, and reports can be generated depending on the run profile selected by the user.

SHARELOG WHEEL OF ADVANTAGES

ADDITIONAL SHARELOG FEATURES

The critical authorization profile in ShareLog allows the identification of users with critical system authorizations in SAP, helping to pinpoint those who have been incorrectly assigned inappropriate SAP profiles. This feature can be easily configured in the run profile and can be enabled or disabled as needed.

The consecutive transaction feature identifies if a user has attempted to execute a specific transaction without authorization more than the number of times configured in ShareLog.

The critical transaction feature identifies users who have performed transactions within the ShareLog system that are crucial for the SAP system.

SHARELOG ROI

In comparison to any security products available in market, our product is easy, secure, robust and attractively cheaper.

ShareLog is implemented within the Organization's SAP Landscape using ABAP; therefore, the audit data and application resides within the Organization.

Any future enhancement requirements can be easily achieved through us or with inhouse development capabilities.

SHARELOG OFFER

Comprehensive Support Guarantee

Upon purchasing our product, we guarantee full support from our team for configuring, installing, and training users on the product according to your organization's requirements. We are pleased to offer continuous support for the product through our support subscription.

Easy Customization

We can customize the product based on the business requirements and provide ongoing support for optimizing the product. We offer diverse configuration choices as per the requirements for multiple operational run profiles tailored to the organization's needs.
